

ABSTRACT OF THE DISCLOSURE

[0066] The animal toilet enclosure has a bottom section removably coupled to a floorboard section, a cover section removably coupled to the floorboard section, and a means for controlling the enclosure. The bottom section has a bowl with an outlet in fluid communication with a grinding device and a sewer. The floorboard section has multiple floorboards each coupled with a floorboard axle having either an active or passive means for rotating. The cover section has a sliding door, a hinged top, multiple vertical walls, and at least one shower head in fluid communication with a water supply. The means for controlling the enclosure has sensors and a pre-programmed activation circuit.
